Company Profile 2022.

INTRODUCTION

Trafe is an international Crude & Petroleum Product Supply with Drilling service, Operating world wide with offices in The USA, Netherlands, UK, Switzerland, Kuwait and Oman. Our Group is a forward-thinking organization who tries to make difference in the world by: “Developing and implementing innovative solutions to the world’s most complex challenges.”.

We believe our pioneering spirit will deliver superior solutions for our clients. We are dynamic, brave and purposeful, breaking through barriers and charting new ground, genuinely making a difference but always with a conscience. We aim to create opportunities where others have not, We search for sustainable solutions where others can not. We develop revenue-generating solutions to common and complex industry challenges.

An EPC contractor, having Crude & Petroleum Product Supply division, with a fast growing worldwide client base, specialized in a full range of drilling services. Trafe provides tailor made drilling teams, full overhaul, spare parts and certifications for your drilling equipment. Our staff is motivated, well trained, certified and ready for any job.

Your problem is our GOAL

CEO’s Speech

The idea behind Trafe leads back more than 20 years ago were a couple of Dutch no-nonsense sailors who had already earned their spurs in the offshore, decided to work together worldwide to carry out the most complex assignments, alone or in a team.

All educated and trained by experiences with high pressure drilling in the most complex form near the coast of the Netherlands and England in the dreaded North Sea.

That sense of invincible seamanship is still the drive that all our employees radiate. Wherever they are. Whatever problem needs to be solved.

Now that Trafe Group of Companies has grown into a globally operating company with a large database of specialists for every job, we no longer see each other every day. But the feeling remains of that group of friends who see every problem of the customer as a challenge.

That is what Trafe Group of Companies still stands for: Your problem is our challenge!

Michael Fokker, CEO

SUSTAINABILITY

Sustainability- Deeply embedded in Trafe everyday business

1. Human and labor rights.
   Human rights has been one of the key elements of our sustainability in the recent years. With our work, we aim to make positive impacts for our employees and other stake holders in our value chain towards the earth, our climate and social environments.
2. Environment officer
   We at Trafe decided already in 2016 that with the work we do all over the world we had to take our responsibility towards our environment. We decided to bring in an environment officer who is 24/7 dedicated working towards possible solutions for our work with regards to the environment. This has led towards a good knowledge of the impact of our work to climate change, supply chains, work circumstances and possible sustainable materials to be used.
3. Climate
   According to our purpose and vision, we at Trafe aim at leaving a healthier planet for our children by creating choices every day. We advise on day to day bases our customers to reduce emissions by developing lower emissions solutions. We actively arrange workshops at our working sites together with our clients to introduce solutions for emissions reducing and a better climate.
4. Our employees
   One of our standards is a zero accident protocol which means that we try to avoid all risk or any danger during the executions of our jobs. These zero accident protocols have been embedded in procedures and also in our tools and protecting measurements towards our employees.
   Our day to day communications with our employees worldwide is to give them a family feeling and to see Trafe as their second home.

   We at Trafe are having an active policy by trying to get women on leading positions into the company. We work together as a family regardless of your religion your nature and social background.

We offer the complete package of services, employees with proper training and necessary certificates.

Trafe is also active in projects and product development.
Example; we are actively involved with mobile video surveillance systems that are widely used in offshore, shipping and construction.

WHAT WE DO -

SOLUTIONS

TRAFE TANK STORAGE OMAN

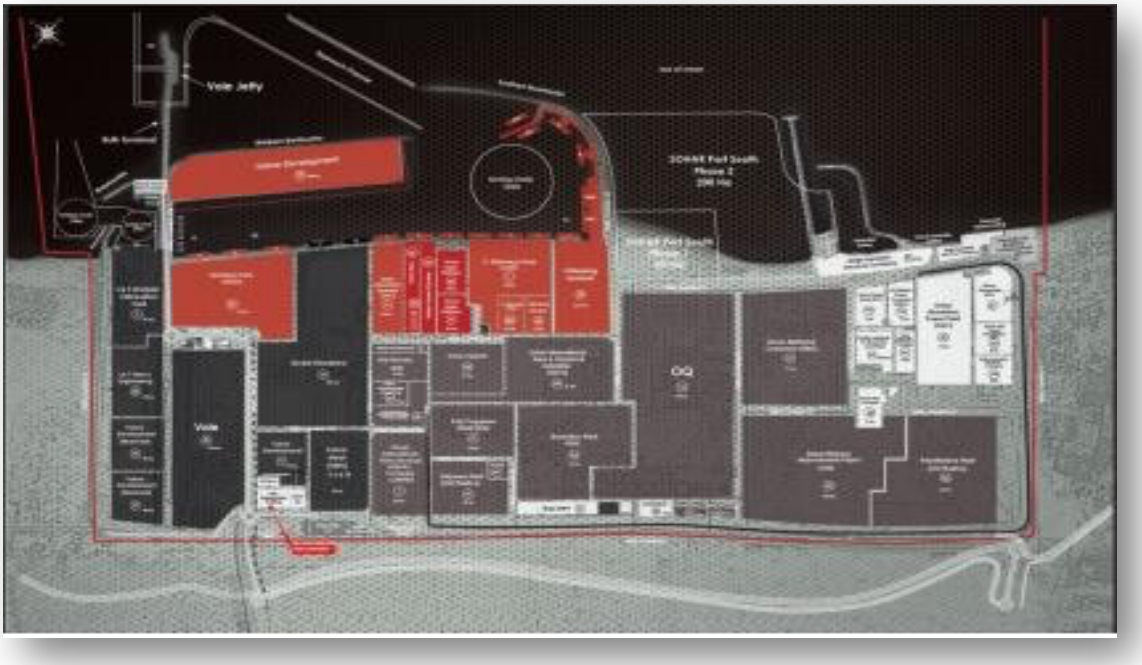

Trafe Group of Companies has acquired in the beginning of April 2022 a tank storage facility of 9.000.000 BBL (almost 1.1 Million MT) in the Port of Sohar at the Sultanate of Oman.

The Board of Directors of Trafe Group of Companies came to the decision of acquiring a tank storage facility in Oman for various reasons:

1. The oil and gas trading activities are executed from our branch office in Muscat Oman
2. The Port of Sohar is the perfect hub between East and West
3. The Port of Rotterdam which still is the main harbor for our products is situated in the EU zone.
4. EU will not allow all vessels entering EU ports after the beginning of 2023
5. Tank storage managed by our own logistic team gives us a lot of freedom towards our clients.

Sohar Port

Sohar is a deep-sea Port and Freezone in the Sultanate of Oman, managed by Sohar Industrial Port Company (SIPC), a 50:50 joint venture between the Port of Rotterdam and the Sultanate of Oman

SOLUTIONS

Sohar port is situated midway between Dubai and Muscat, SOHAR saw its first vessel berth in 2004 and the adjacent Freezone was added in 2010. 2020 saw over 5,434 vessels call in SOHAR and the port now handles in excess of one and a half million metric tons of sea cargo each week. With multinational investments to-date of over US26$ billion, it is one of the world's fastest-growing port and free zone developments and lies at the center of global trade routes between Asia and Europe.

Trafe Tank storage in Sohar Port
The tank Storage is situated at the left side of the entrance with their own birth at the quay side.
The seaway entrance has a depth of -19 meters and at the birth there is a depth of -16 meters.
Trafe helds 4 tanks with the numbers CTTT-C61, CTTT-C99, CTTT-22 and CTTT-90 at the Oman Tank Terminal Company LLC with a capacity of 9.000.000 BBL or 1,1 Million MT.

The tanks are now ready for all kinds of products like EN590, D2. D6 and gasoline. For the storage of A1 jet fuel there will be done adjustments on our tanks done at the end of August 2022.

We offer the complete package of services, high skilled specialists with proper training and necessary certificates.

Trafe will provide you the right specialists for performing the following disciplines.

- Managing and hands on drilling rig activities on Drill ships Semi-submersible &jack up drilling rigs.
- Engineering.
- Operating.
- Maintenance.
- Overhauls.
- Factory Acceptance Test Witnessing.
- Quality insurance as third-party witness.
- Preservation of drilling rigs for prior being stacked.
- Returning drilling rigs back into operation.
- Equipment repairs.
- Inspections.
- Engineering, Design and Construction Services.
- Technical Manpower Services.
- Security Services for Oil and Gas Assets.
- Sourcing and supplying parts and components. New and used.

SOLUTIONS

In cooperation with our worldwide network of specialists Trafe is able to manage the following services

- Oil and Gas Exploration and Development
- Oilfield Services
- Drilling and work over fluid services
- Environmental services
- Well testing and early production facility Engineering, Design and Construction Services
- Technical Manpower Services for well testing
- Security Services for Oil and Gas Assets

OIL & GAS EXPLORATION & DEVELOPMENT

The partners of Trafe have many years of experience in Energy development and discovery, and a vast network of associates, providing following services:

- Reservoir studies - Field studies
- Field development plans
- Work programs and operations management
- Sourcing and supplying parts and components
- Overhauling, repair and maintenance
- Offshore jack-up and Semi-sub operations
- Financing and finance planning

DRILLING & COMPLETE FLUID SERVICES

- Multilateral drilling
- HTHP drilling and evaluation
- Completion fluid filtration
- Reconditioning of drilling and completion fluids
- Fluid analysis

Environmental services

- Feasibility studies
- Site assessment
- Oil waste management
- Soil remediation
- Vessel and production tank cleaning

WELL TESTING & EARLY PRODUCTION FACILITIES

- Production testing
- Well cleanup
- Extended well testing
- Data acquisition and interpretation
- Fluid samples and analysis
- Design and manufacturing capabilities
- Build-Operate-Transfer
- Operations and maintenance
- Flexible commercial models

CASED HOLE SERVICES

- Gamma ray/CCL
- Radial cement bond tools (RBT)
- Multifinger imaging tool (MIT) and magnetic thickness tool (MTT)
- Pulse neutron neutron (PNN) tool
- Production logging tool (PLT)

TRACK RECORD

- Onshore Drilling Sultanate Of Oman, 3 LR 15 wells5 years contract
- Onshore Drilling KOC, Kuwait, KOC 2 LAND RIGS, South of Kuwait, 12 wells.
- Supervised rig acceptance and prepared the drill ship ODN 1 for contract with Petrobras
- Changed out complete Aker CMC on location (first ever and only) on the ODN 1
- Supervised rig acceptance and prepared the drill ship ODN 2 for contract with Petrobras.
- Prepared drill ship Norbe 8 for contract with new client “TOTAL”
- Installed Acoustic BOP control system and auto shear system upgrades on the BOP system on Norbe 8.
- Supervised and managed 5 yearly recertification of all well control equipment Norbe 8 on location.
- Supervised and managed 5 yearly recertification of all well control equipment Norbe 9 on location
- Supervised and managed completion of construction, rig acceptance and prepared the semi-submersible DELBA 3 for contract with Petrobras.
- Supervised and managed rig modifications and recertification Semi-Submersible drilling rig ODN Tay former Stena Tay.
- Developed and installed new BOP control system on drill ship Noble Roger Eason.
- Developed and Installed Cyber chair drilling control systems and replacement of complete drilling package on Jack up Rig Noble Al White.
- BOP recovery on Semi-Submersible ODN Tay.
- Well examinations for geothermal projects in The Netherlands, including wells CAL-GT-01,CAL-GT-02,CAL-GT-03,HEK-GT-01,HEK_GT-02
- Well examination schemes for Dutch based drilling company
- North Sea HSE cases for all drilling units of a drilling contractor
- ISO140001 audit program for mobile drilling units
- Quantitative Risk Assessment for the Borehole Drilling project in Republic of Ireland.
